Since graduating college in 2013 with a degree in finance I have worked in the financial industry as a back-end analyst. In February 2017, I made the difficult decision to alter my career trajectory and pursue an avenue more in line with my passion for continuous learning and the world of tech. I enrolled in the The Iron Yard's Front End Engineering course, a program that includes 12 weeks of immersive training focused on core concepts and best practices for building responsive front end web applications. As a recent graduate of the The Iron Yard, my goal is to join an organization where I can contribute in a team environment and continue building upon the junior development skills I've obtained thus far.

SKILLS

The core components of the Front End Engineering course at The Iron Yard included HTML, CSS and JavaScript. Additional emphasis was placed on CLI proficiency, Git and Git flow, pair programming, test driven development, and reviewing documentation. Weekly projects established thorough understanding of core components and introduced additional frameworks, helper libraries, and build tools.

HTML5 / CSS3	JavaScript	Build	Firebase	Other
• Bootstrap	• jQuery	• npm	• Rebase	• APIs
• Sass	• ReactJS	• express		• MongoDB
• MaterializeCSS	• Redux			• CMS

PREVIOUS EXPERIENCE

BOA/ Merrill Lynch — Jacksonville, FL   **December 2013 - March 2017**
Back-End Operations Analyst
- Worked with Treasury to fund more than 170 bank accounts for various legal entities within Merrill Lynch and Bank of America.
- Worked closely with the firm's internal and external clients throughout the organization, including operational staff, Technology, Compliance, Legal, and project managers.
- Made time sensitive funding decisions that could cost the firm thousands of dollars in bank overdraft fees.
- Developed solutions in Excel and other internal systems to increase efficiency and process transparency

Atkinson's Pharmacy — Orange Park, FL   **September 2007 - December 2013**
Pharmaceutical Technician
- Mixed pharmaceutical preparations, according to written prescriptions.
- Established or maintained patient profiles, including lists of medications taken by individual patients.
- Computed charges for medication or equipment dispensed to hospital patients and enter data.
